

6 BENEFITS OF CHOOSING THE 3 MONKEYS SCHOOL PROJECTION SYSTEM FOR YOUR HALL OR UNDERCOVER AREA

6 BENEFITS OF CHOOSING THE 3 MONKEYS SCHOOL PROJECTION SYSTEM FOR YOUR HALL OR UNDERCOVER AREA

1. One Touch Operation

We have designed our school hall or multipurpose area projection system with ease of use in mind. We don't expect you to have to turn on multiple components with switches or complicated remote controls, simply push the "On" button to begin your visual presentation. The screen and projector are activated and will turn on automatically, ready for you to connect your device and start displaying your slide show or video. This means that now anyone in the school can operate the system, without having to rely on one particular teacher or staff member that "knows this stuff".

2. Connect Any PC or Device

Featuring an auto selecting input plate, any PC or Device is easily connected. This can include Apple TV or any other type of wireless presentation device. Whether it is one of our Triple PA Systems or another pre existing Audio System. We'll also make it easy for you to connect your audio output via cable or wireless for sound.

3. Big and Bright

For most school halls and undercover areas a 2.8m wide screen provides a sufficiently large image for viewing from anywhere within the area. Brightness levels are achieved by a single lamp 7000ansi lumen projector. That's more than twice the brightness of the latest classroom projectors. For larger area coverage, we offer dual projection solutions with built in video distribution, whilst still retaining automation and ease of use.

4. Long Life, Low Maintenance

Every projector requires maintenance, but when you have a projector installed high in a school hall, getting up there to clean filters and change lamps is not as easy as classroom projector maintenance. It involves lifting equipment and associated costs.

6 BENEFITS OF CHOOSING THE 3 MONKEYS SCHOOL PROJECTION SYSTEM FOR YOUR HALL OR UNDERCOVER AREA

To address this, we use a projector with a long lamp and filter life, up to 4000hrs. If you use this system for 10 hrs every week, you should only have to service the unit every 5 years as a minimum. Whilst we don't lock you into a service arrangement, we do recommend a service annually or bi annually for preventative maintenance, reliability and longevity of your investment.

5. Auto Shutdown & Protection

In order to further protect your investment and save on energy and maintenance, we include an auto shut down feature within every school projection system. This means that if the System is accidentally left running at the end of a rehearsal or assembly, the system will simply pack itself away after 6 hrs running time.

This includes shutting down the projector to save lamp and filter life, as well as retracting the screen back into its housing to protect against damage by balls or other objects. Physical protection of the projector is provided by a purpose designed cage and bracketing system that provides as much protection as possible within an open area.

6. Service & Support

3 Monkeys Audiovisual understands the importance of your school assemblies and presentations. We also understand that the best made plans, with the best equipment and attention to detail, can sometimes require more effort and adjustment than initially anticipated. We take pride in the systems that we design and install within your school and we take full responsibility for any adjustments repairs or replacements that may be required from time to time. We respond in a timely manner and make every effort to solve any issues that may arise.
