

## Wireless-Go Solution

**Wireless GO** is an ultra-compact digital wireless microphone system which is unique in its clip 'n' go versatility, incredibly compact form-factor, and unmatched price accessibility.

It's the perfect wireless mic solution for content creators in all disciplines: filmmakers, on-camera presenters, newsgatherers, vloggers and more.

### The Transmitter (TX)

Measuring in at an ultra-compact 44mm x 45.3mm x 18.5mm and weighing just 31g, the Wireless GO transmitter (TX) acts as either a quick and easy clip-on wireless microphone, thanks to a high-quality **built-in** omnidirectional condenser capsule

### The Receiver (RX)

The RX is just as compact, measuring only 44mm x 46.4mm x 18.5mm and weighing only 31g, which makes your rig that much easier to carry and facilitates mounting on a range of camera gimbals and stabilisers. Its dual-purpose mount sits snug in your camera's shoe mount, or clips easily onto your camera strap or an item of clothing. The supplied 3.5mm TRS output cable plugs into your camera's audio input or, with the relevant available RØDE adaptors, into your recorder, GoPro, iPhone etc. There is also a three-stage output pad – 0dB, -12dB, -24dB – to tailor your output to your camera or recorder.

## Features

- Operates as a **clip-on** microphone or beltpack transmitter for a lavalier/headset microphone (*sold separately*)
- **Built-in omnidirectional condenser microphone** delivers broadcast-quality sound
- All-new Series III 2.4GHz digital wireless transmission with 128-bit encryption designed to deliver **crystal clear audio** under any conditions, even in locations with dense Wi-Fi and Bluetooth activity like shopping malls, conventions, hotels etc
- **Up to 70m range**\_(line-of-sight), but optimised for shorter-range operation in congested radio-frequency environments
- TX and RX have **built-in rechargeable batteries**, charged via USB-C
- Up to **7 hours** on a full charge, including a battery-saver mode
- Super-**lightweight** and ultra-compact: TX is 31g and RX only 31g
- The transmitter and receiver pair in just 3 seconds
- 3-stage output pad: 0dB, -12dB and -24dB
- RØDE's market-leading smartLav+ (with an SC3 adaptor), Lavalier microphone and HS2 headset microphone are perfect companions for the Wireless GO when used as a beltpack (and sold separately)
- Use up to 8 systems in one location.

## Optional extras available

**The RØDE Lavalier** is a discreet lapel microphone that provides broadcast-quality audio when close-miked in almost any scenario.

The Lavalier's low self-noise, user friendly omnidirectional polar pattern and minimal appearance make it an ideal solution for film, television, video, theatre, house of worship and anywhere where a high quality microphone needs to be heard but not seen.

**The RØDE HS2 Headset** is a low profile, ergonomic and lightweight headset microphone that provides clean, clear and pronounced audio for any application where the microphone needs to be in close proximity to presenter's mouth.

The result of an extensive and complete redesign process, the RØDE HS2 features an adjustable corrosion resistant stainless spring-steel boom arm and headband connected to pliable hypoallergenic silicone ear strips for maximum flexibility and user comfort.
